PROFESSIONAL SUMMARY

Senior full-stack engineer with 6+ years building web products, cloud platforms and backend systems, with a focus on applied AI. Currently at SoFi Tech Solutions, working on the APIs behind its financial infrastructure. Experience across AWS, Azure and GCP with Terraform, Docker and Kubernetes, and hands-on work with computer vision, RAG pipelines and agentic development.

EXPERIENCE

SoFi Tech Solutions Remote
Senior Software Engineer Dec 2025 – Present

- Core member of the API team at SoFi Tech Solutions (formerly Galileo Financial Technologies), building the backend systems behind the company's financial infrastructure.
- Led and contributed to the monolith-to-microservices migration, shipping 4 new services with independent automated deployments.
- Built service-level dashboards and monitors with Datadog and Coralogix, improving traceability and incident response.
- Migrated client documentation to ReadMe, cutting deployment time by 40% and speeding up onboarding.
- Practice agentic development daily under the company's security standards for AI-generated code in a banking environment.

  Stack: Python, Docker, Terraform, GitLab CI, Jenkins, Datadog, Coralogix, Cloudflare

Uwigo/Informat Remote
Senior Platform Engineer Aug 2025 – Dec 2025

- Migrated the platform from DigitalOcean (18 droplets across 3 environments, databases, backups and a load balancer) to serverless Azure with zero user impact, cutting infrastructure costs by ~60%.
- Designed the unified authentication and authorization microservice used by every product, autoscaling to serve ~2,000 client companies.
- Set up log monitoring, custom alerting and real-time dashboards with New Relic.
- Built scalable frontend interfaces and a design system for the company's products.
- Standardized API response formats and documented process improvements across teams.

  Stack: Python, FastAPI, Azure, Terraform, PostgreSQL, Docker, Kubernetes, New Relic

Blue Express Remote
Senior FullStack Engineer Aug 2024 – Aug 2025

- Built the web app that tracks couriers, deliveries and order status in real time, plus the internal configuration panel, with Next.js and Tailwind.
- Built the event-driven backend on EventBridge, queuing delivery, pickup, movement and notification events per order and per courier.
- Adapted a computer-vision model served on Cloud Run and integrated it into the web and mobile apps to validate courier photos (pickup, transit and delivery) before storage, filtering out invalid images at high volume.
- Provisioned the infrastructure with Terraform and contributed to the Flutter mobile app.
- Reduced costs by ~30% once the project was completed.

  Stack: Python, FastAPI, TypeScript, Next.js, Tailwind CSS, Flutter, Dart, MongoDB, Firebase, Redux, Terraform, CloudFormation

ioet Remote
Software Engineer Sep 2022 – Jan 2025

- **Symphonie.ai** (Fullstack Developer): Built the web application of a multinational, data-driven product that brands use to query their own insights. Processed, stored and labeled data in vector stores to train the ML models behind its RAG system, and shaped that data for both the model and the frontend.
- **Hewlett Packard Enterprise** (Backend Developer & Test Automation): Worked on a high-impact automation project: wrote the automation scripts that streamlined team workflows, and maintained and scaled the microservices behind them. Led the rollout of integration, load and stress tests to make the system more resilient.
- **Pair Eyewear** (Frontend Engineer): Maintained and extended the customer-facing e-commerce web app: shipped new features, improved the shopping experience and optimized performance by roughly 20%.
- **ioet Payroll & Billing** (Fullstack Developer): Led development of ioet's internal payroll system, which pays around 250 people, and automated its billing process: designed, built and maintained the components that keep payroll accurate, and worked with other teams to fit the automation into the company's workflow.
- **ioet UI Standard** (Frontend Developer): Created ioet's internal UI library, released as a versioned npm package. It became the company standard: every team moved its frontend onto it, getting consistent, reusable components and faster frontend work.

  Stack: TypeScript, Python, Go, Next.js, FastAPI, GraphQL, AWS, Terraform, Kafka, Kubernetes

ioet Remote
Information Technology Intern Apr 2022 – Sep 2022

- Trained as a fullstack engineer across frontend, backend and infrastructure through pair programming and guided tasks on real projects.
- Contributed to TimeTracker, ioet's internal tool for tracking work hours in real time, built with Angular and Python.
- Did QA for a client's marketplace where users buy shares of songs to earn royalties.

- Hired as a Software Engineer at the end of the internship.
  Stack: Python, Angular, PostgreSQL, Azure, Postman

Freelance Quito, EC
Web Developer May 2022 – Oct 2022

- Built an academic management platform for the military education department of Universidad de las Fuerzas Armadas ESPE, covering attendance, grades and courses for military students.
- Still take on occasional freelance web projects alongside full-time roles, from design to deployment.
  Stack: TypeScript, React, Node.js, Python, Django, MongoDB, AWS, Strapi

Prowess EC Remote
WordPress Development Team Lead Jan 2022 – Apr 2022

- Led development end to end across an 11-person team spanning web, mobile, backend, data and marketing.
- Launched a marketplace where local merchants list and sell their products with no listing fees or commissions; 12 businesses used it regularly in production.
- Extended the WordPress, WooCommerce and Dokan setup with custom HTML, CSS and JavaScript where the template fell short.
  Stack: WordPress, WooCommerce, PHP, MySQL, JavaScript

Military Applications Research Center (CICTE – ESPE) Sangolquí, EC
AI Developer Jul 2020 – Dec 2021

- Trained a crowd detector with YOLO and Python during COVID-19, labeling the dataset myself; the model was later integrated into Armed Forces drones.
- Built an anomaly detection system for Armed Forces warehouses: a custom 360° camera driven by servo motors that follows intruders in real time and alerts security services with photos and video.
- Used convolutional neural networks and ROI-based tracking in both projects.
- Both prototypes were integrated and used by the Armed Forces.
  Stack: Python, YOLO, MATLAB, Arduino, Computer Vision

LEADERSHIP & COMMUNITY

Google Developer Groups Quito Quito, EC
Organizer Apr 2023 – Present

- Co-organize the chapter's flagship events, DevFest and Build with AI, plus at least one community event per quarter for 5,700+ members.
- Run the work end to end with a small organizing team: speaker sourcing and hospitality, logistics, social media and video.
- Delivered 20+ talks on AI, security, backend and web design.

EDUCATION

Universidad de las Fuerzas Armadas ESPE Sangolquí, EC
Software Engineer (Ingeniero de Software)
Activities: ESPE Software Club member (2018–2022); CIS – IEEE ESPE Branch member (2018–2019)

CERTIFICATIONS

Java Programming, *Oracle*
React – La Guía Completa: Hooks, Context, Redux, MERN, *Udemy*
Introducción a la Visión Artificial con Python, *IEEE Ecuador, INGLIDEX*

SKILLS & LANGUAGES

Languages: Python, TypeScript, JavaScript, Go, Dart, PHP
Frameworks: FastAPI, Django, Next.js, React, Angular, Flutter, Node.js, Tailwind CSS
Cloud & DevOps: AWS, Azure, Google Cloud, Terraform, Docker, Kubernetes, GitLab CI, Jenkins, Datadog, New Relic
AI & Data: Computer vision (YOLO, CNNs), RAG pipelines, Agentic development, PostgreSQL, MySQL, MongoDB, Firebase, Supabase, Kafka
Spoken languages: Spanish (native), English (C1)
